Masking Your Personal Mobile Number

Using the dialing prefix of "*67" before dialing a number effectively blocks a call's 'Caller ID' feature.

The call recipient will see 'Unknown Number' or 'Restricted Call' on their display for the duration of the call, and will be unable to identify a callback number. This caller ID restrictive feature may be useful in certain instances where you may wish to make a business call using your personal cell phone.

You may want to indicate to the call recipient your intent to call at a certain date and time, as there will be no indication to the recipient that the call is coming from your cell phone, or is representative of a business call on behalf of the institution.
